

**DELIGHT**

**ePhoto Frame**

ePhoto frame by Delight, brings the beauty of epaper technology to interior spaces, creating a calm and elegant atmosphere. Designed in the style of a classic frame, it blends seamlessly into its surroundings, presenting visuals with a soft, paper-like finish that adds quiet sophistication without overwhelming the space.

***Innovative • Seamless • Smart • Sustainable***

# ePhoto Frame

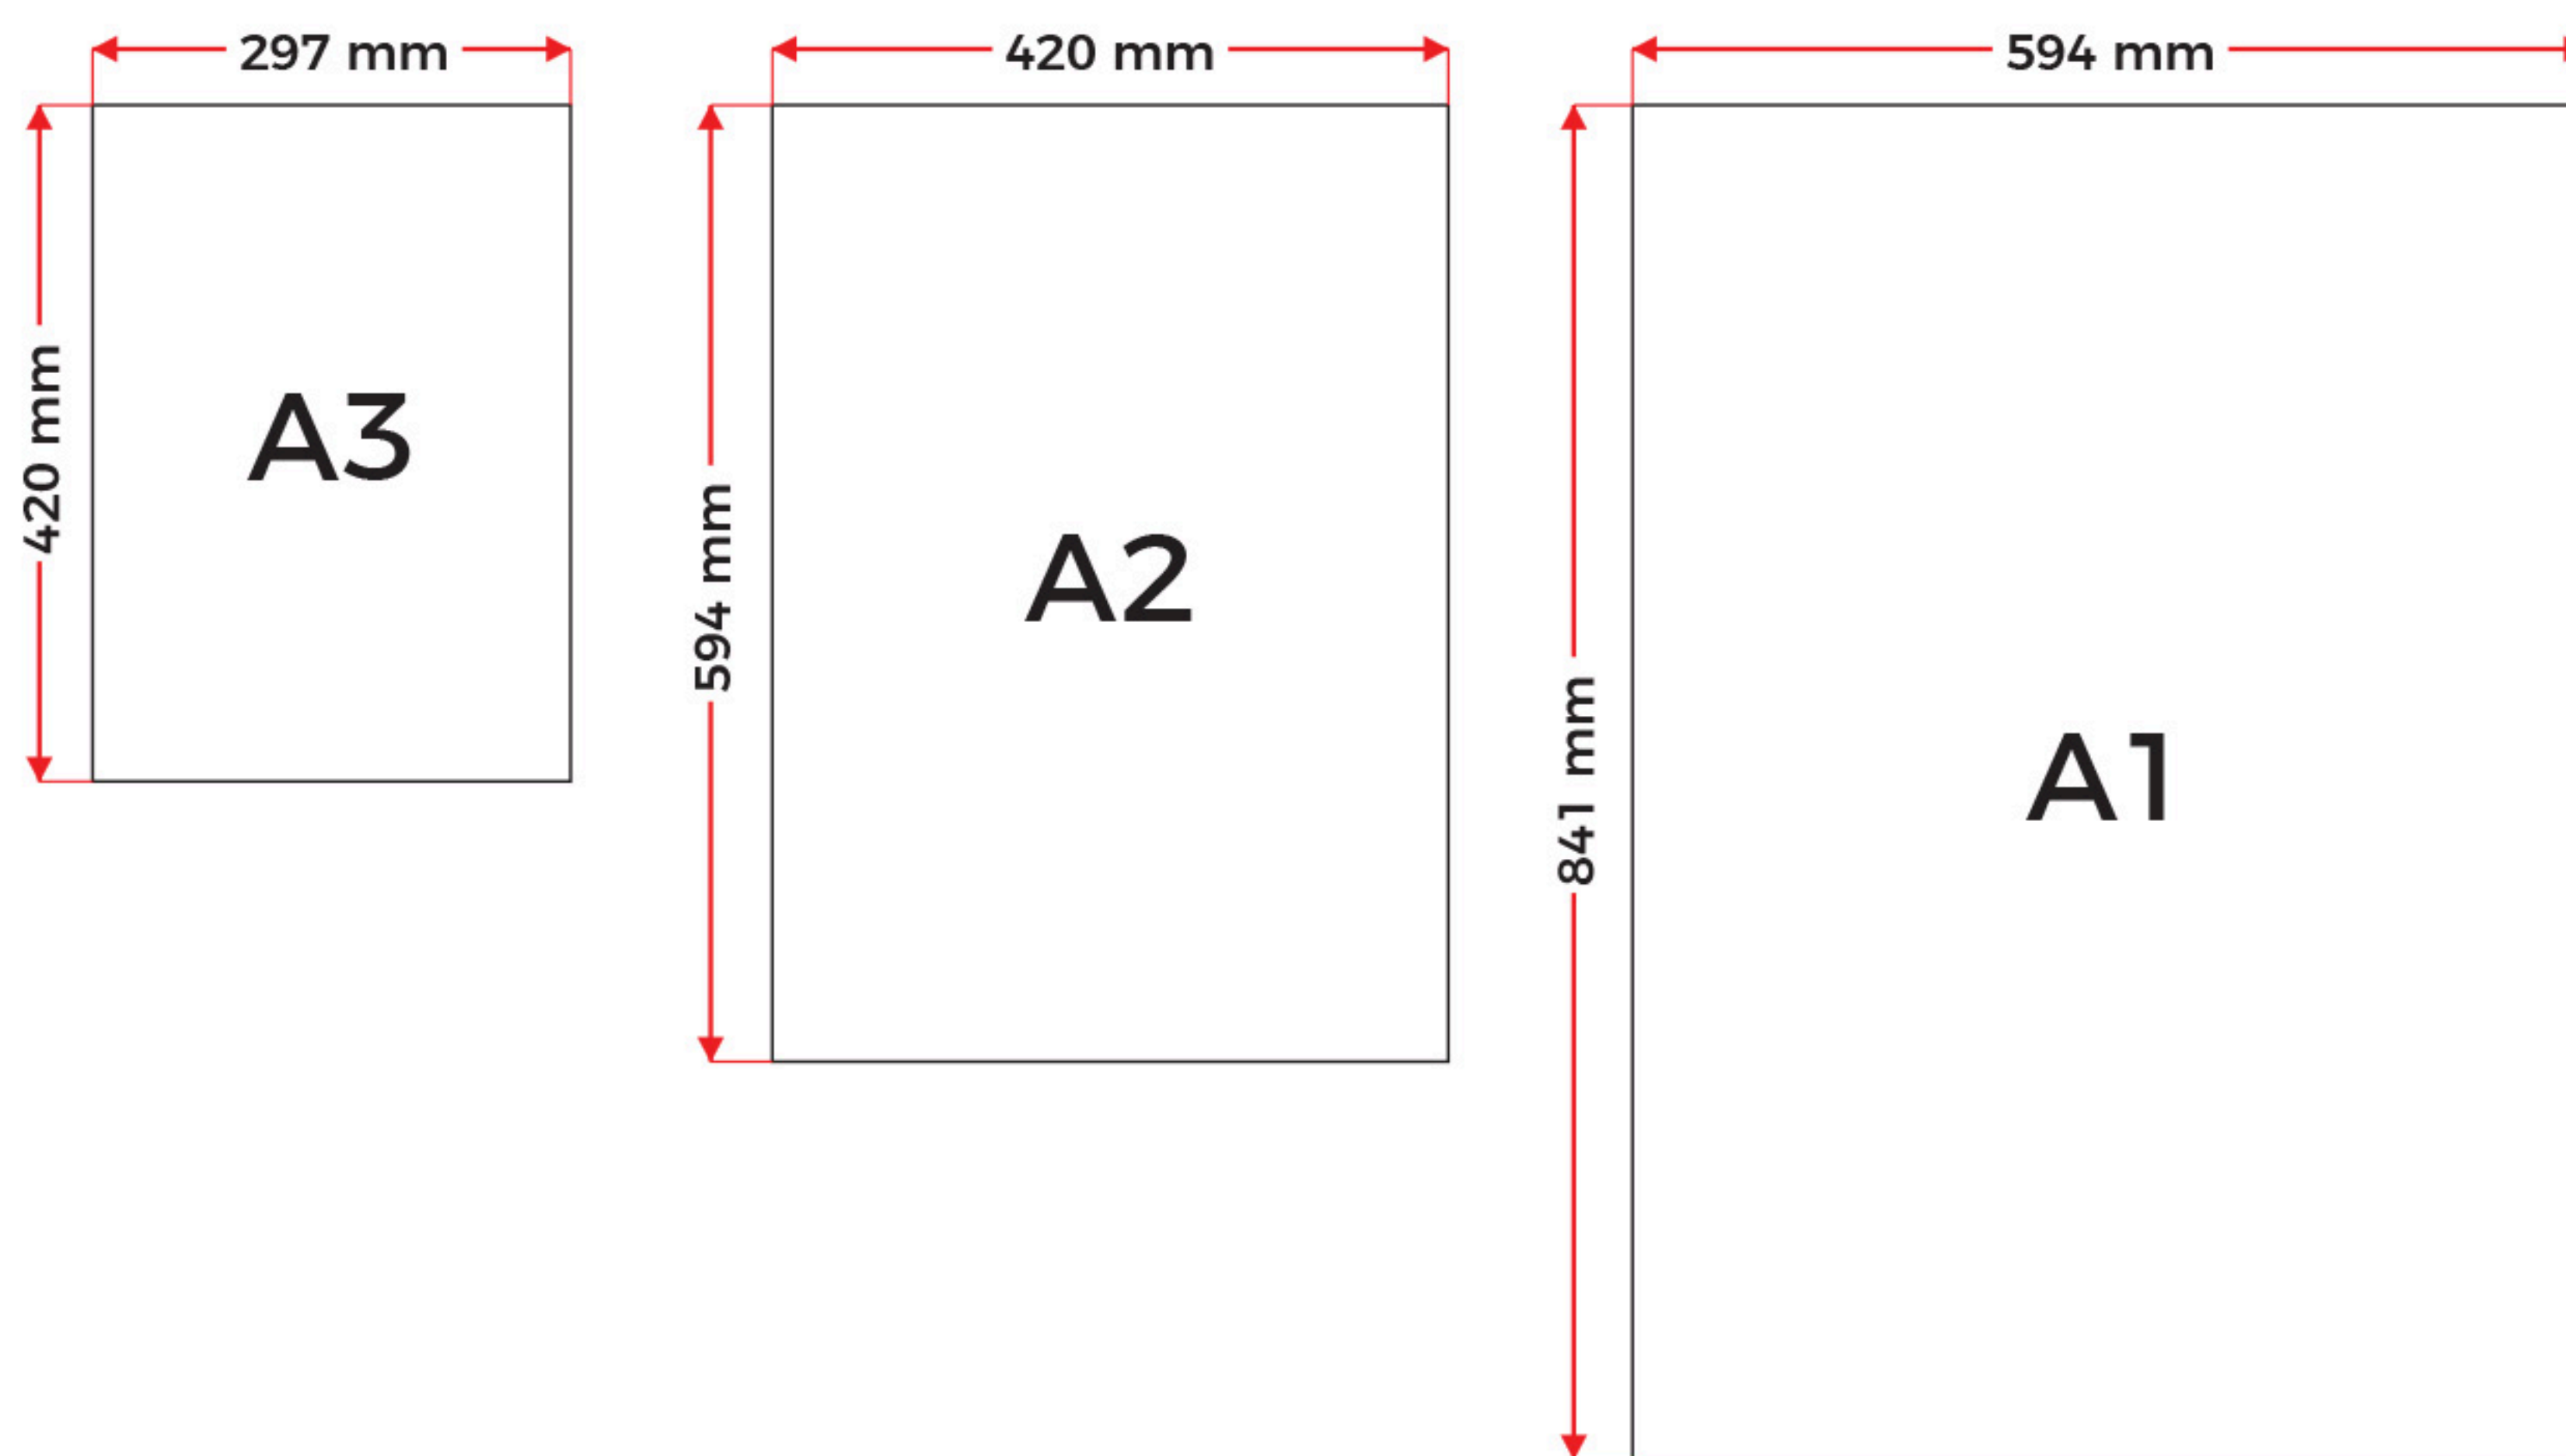

A uniquely crafted ePaper display designed to enhance interior spaces by combining the charm of traditional framed artwork with the subtle intelligence of E Ink technology. Styled to resemble a classic photo frame, it blends naturally into its surroundings, adding a refined and sophisticated visual element.

This display is ideal for interiors such as homes, hotels, lounges, offices and galleries, where maintaining a calm and aesthetic atmosphere is essential. It presents digital visuals in a soft, paper-like finish that feels natural and unobtrusive, unlike conventional screens.

Designed to complement décor rather than dominate it, the frame allows curated visuals, artwork or ambient content to be displayed in a timeless format. With the ability to connect to a centralized platform for easy content updates, it offers flexibility while preserving the elegance of traditional interior styling.

With its battery-powered, wireless design, it can be set up and managed effortlessly without disturbing the space, creating a perfect balance between classic design and modern technology.

Available in A1, A2, and A3 sizes to suit different interior spaces and display needs.

## TECHNOLOGY

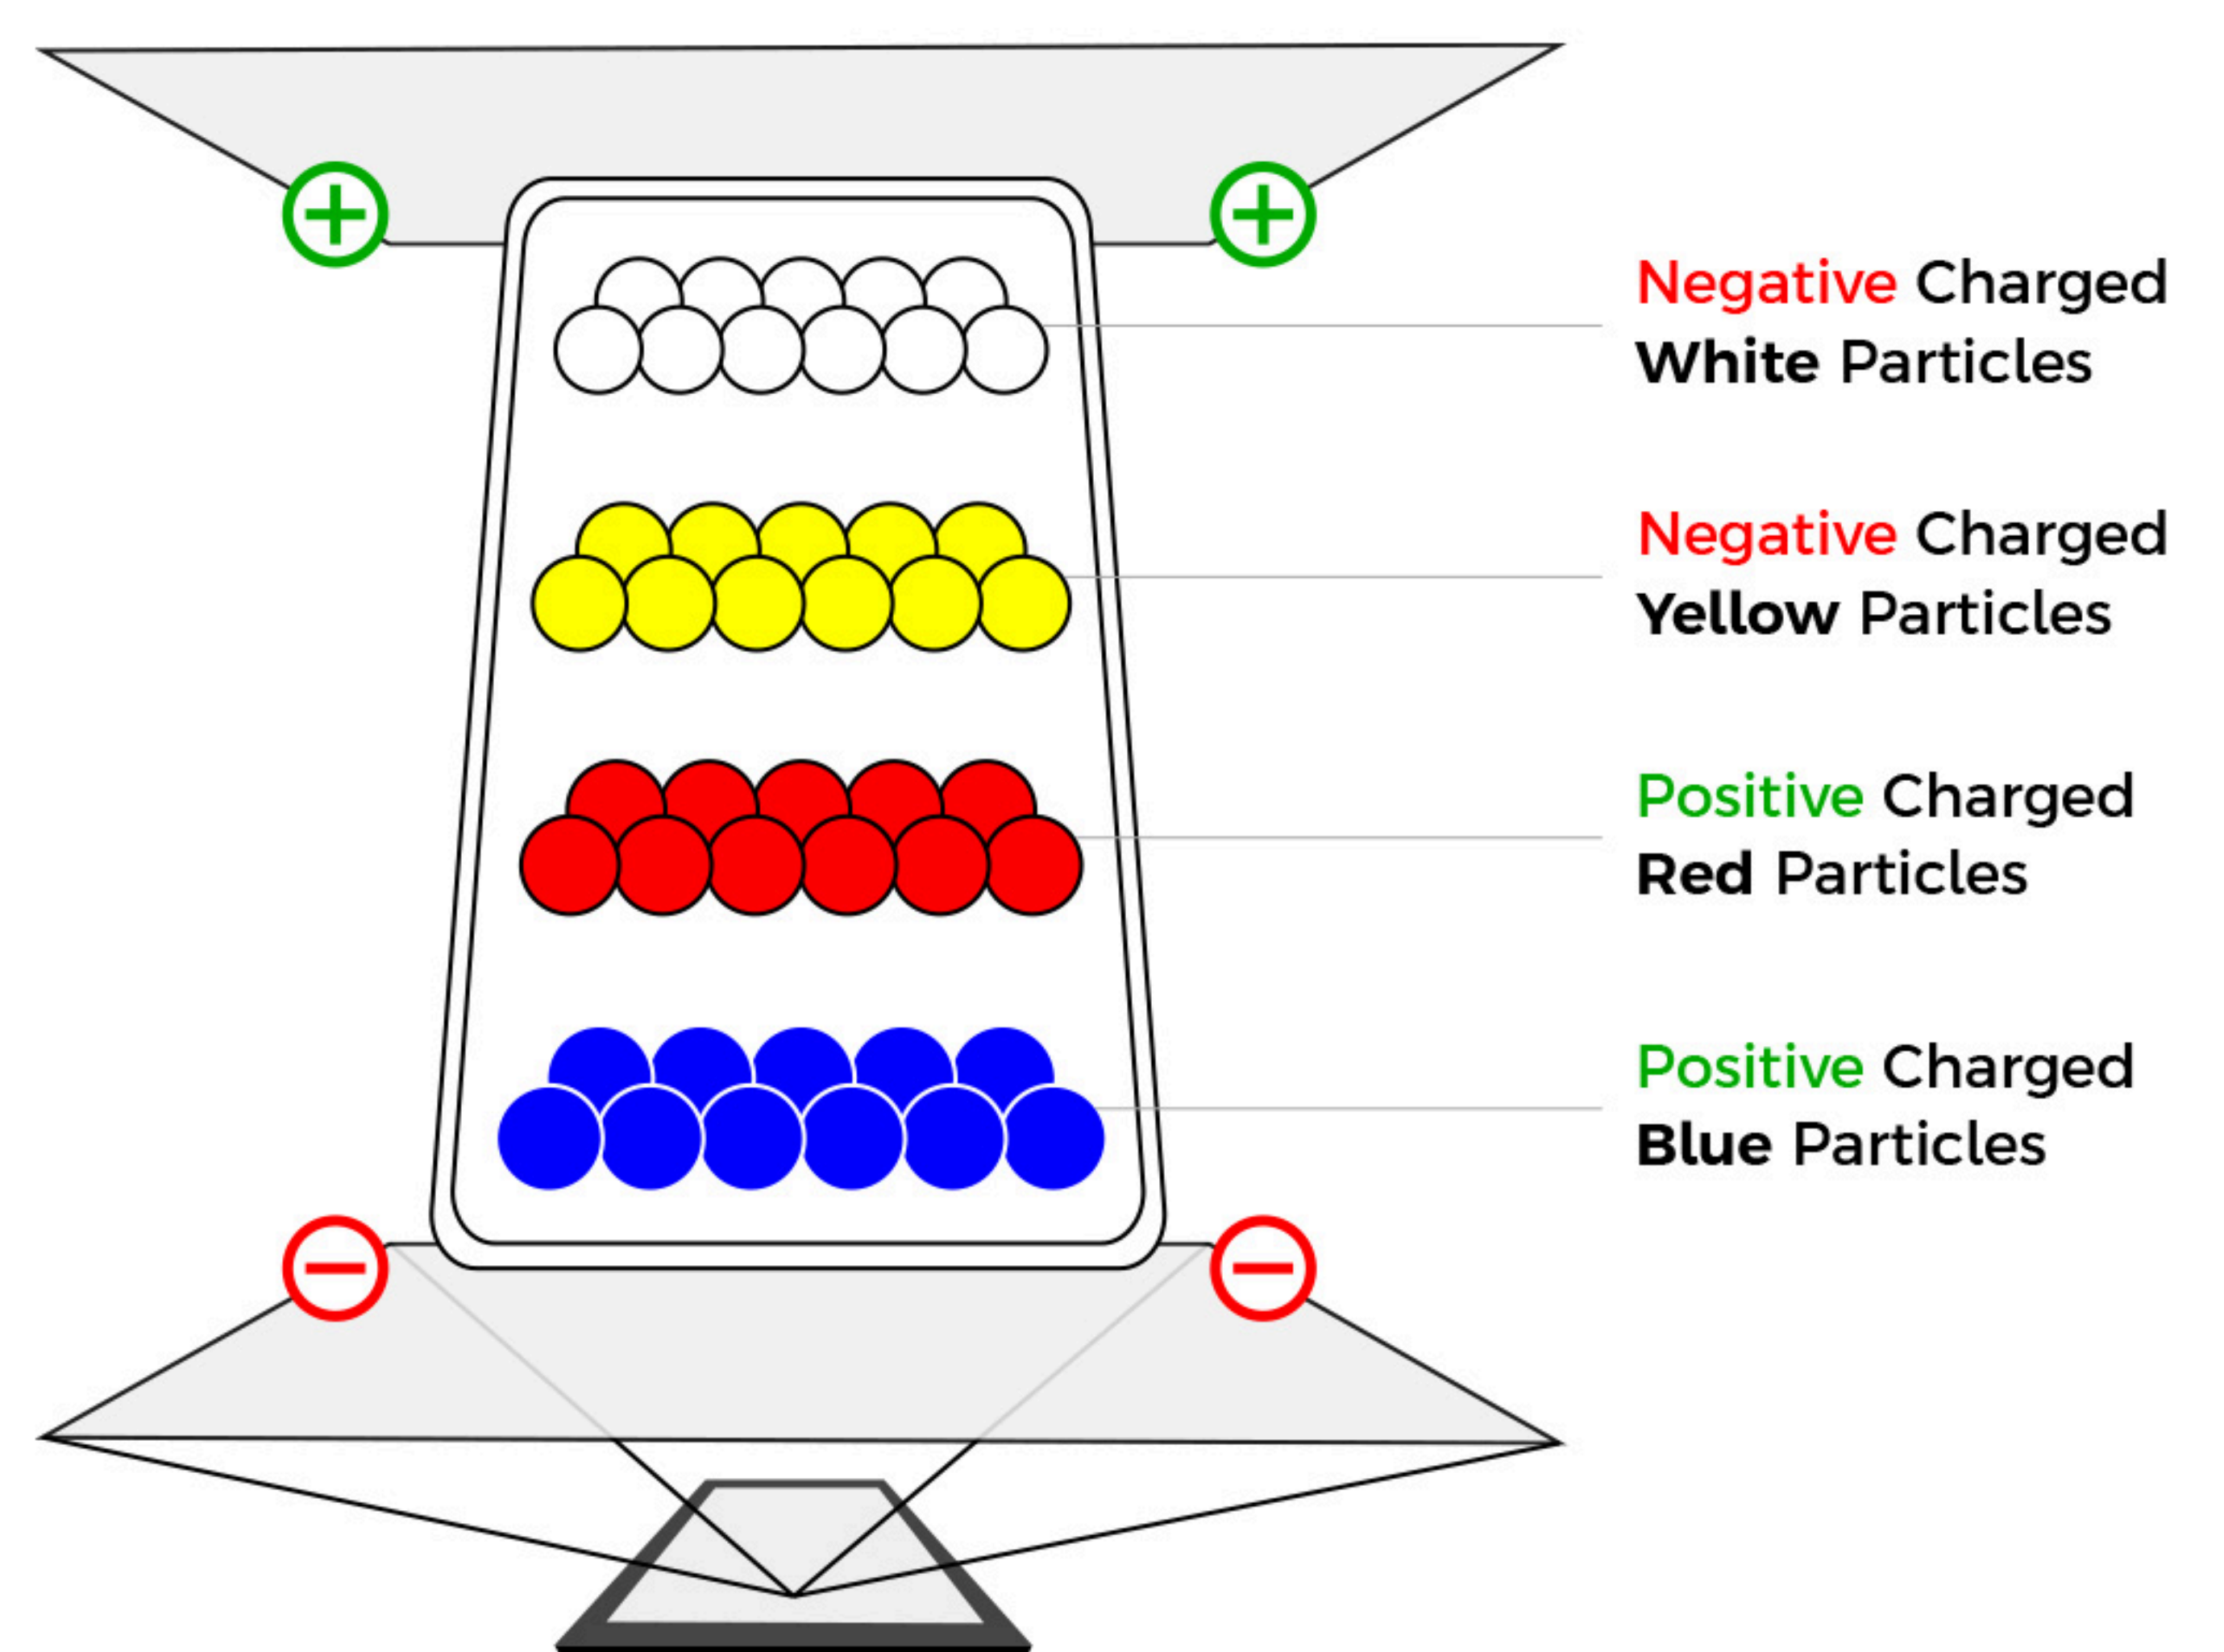

Colour E Ink technology delivers a natural, paper-like display experience designed for modern digital signage. Unlike conventional LCD or LED screens, it does not use a backlight. Instead, it reflects ambient light, ensuring excellent visibility in both indoor and outdoor environments, including direct sunlight.

The display operates using electrically charged color pigments that form images on the screen. Once content is displayed, it remains visible without continuous power, requiring energy only when updates are made.

With no backlight, the display produces no glare, no light emission and no eye strain, offering a comfortable and natural viewing experience like reading from paper.

This makes aPaper an energy-efficient, sustainable and reliable solution for businesses looking to replace traditional printed materials with dynamic digital displays.

E Ink technology reduces operational costs while improving readability and visual comfort, making it ideal for long-term use in retail, healthcare, corporate and hospitality environments.
